TOXICS RELEASE INVENTORY

List of Toxic Chemicals within the Certain Glycol Ethers Category

Section 313 of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA) requires certain facilities manufacturing, processing, or otherwise using listed toxic chemicals to report the annual quantity of such chemicals entering each environmental medium. Such facilities must also report pollution prevention and recycling data for such chemicals, pursuant to section 6607 of the Pollution Prevention Act, 42 U.S.C. 13106. EPCRA section 313 is also known as the Toxics Release Inventory (TRI).

DISCLAIMER

This guidance document is intended to assist industry with EPCRA section 313 reporting for the certain glycol ethers category. In addition to providing an overview of aspects of the statutory and regulatory requirements of the EPCRA section 313 program, this document also provides recommendations to assist industry with EPCRA reporting. These recommendations do not supersede any statutory or regulatory requirements, are subject to change, and are not independently binding on either EPA or covered facilities. Additionally, if a conflict exists between guidance on this site and the statutory or regulatory requirements, the conflict must be resolved in favor of the statute or regulation.

Although EPA encourages industry to consider these recommendations, in reviewing this document, industry should be aware that these recommendations were developed to address common circumstances at typical facilities. The circumstances at a specific facility may significantly differ from those contemplated in the development of this document. Thus, individual facilities may find that the recommendations provided in this document are inapplicable to their processes or circumstances, and that alternative approaches or information are more accurate and/or more appropriate for meeting the statutory and regulatory requirements of EPCRA section 313. To that end, industry should use facility specific information and process knowledge, where available, to meet the requirements of EPCRA section 313. EPCRA section 313 also provides that, in the absence of such readily available data, a reporting facility may make reasonable estimates to meet those EPCRA section 313 requirements. Facilities are encouraged to contact the Agency with any additional or clarifying questions about the recommendations in this document, or if the facility believes that EPA has incorrectly characterized a particular process or recommendation.

Additional guidance documents, including industry specific and chemical specific guidance documents, are also available on TRI's GuideME website:

SECTION 1.0 INTRODUCTION

On June 28, 1994, EPA promulgated a final rule (published in the Federal Register July 5, 1994, 59 FR 34386) modifying the definition of the glycol ethers category on the list of toxic chemicals under section 313 of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA), 42 U.S.C. 11001 et seq. The effect of this modification is that many high molecular weight glycol ethers were excluded from the category. As described in the final rule, this modification was made retroactive for the 1993 reporting year for reports due July 1, 1994. This modification was also effective for all subsequent reporting years. As part of this modification and as the result of public comment, EPA changed the category name at 40 CFR 372.65(c) from 'glycol ethers' to 'certain glycol ethers.' However, this document will refer to the constituents of this category simply as glycol ethers. At the time of the modification, EPA indicated that the Agency would work with the public and the regulated community to develop, as appropriate, interpretations and guidance that the Agency determines are necessary to facilitate accurate reporting for the modified glycol ethers category. This document constitutes such guidance.

Section 1.1 Glycol Ethers Category Definition

The glycol ethers category is defined by the following formula:

$R - (OCH_2CH_2)_n - OR'$

where:

n	=	1, 2, or 3;
R	=	Alkyl C7 or less, or phenyl or alkyl substituted phenyl;
R'	=	H or alkyl C7 or less, or OR' consisting of a carboxylic acid ester, sulfate, phosphate, nitrate, or sulfate.

Chemicals that meet this category definition are reportable.

EPA is providing three lists of CAS numbers and chemical names to aid the regulated community in determining whether they need to report for the glycol ethers category. SECTION 2.0 lists individual chemicals that meet the definition of the EPCRA section 313 'certain glycol ethers' category. This list consists only of chemicals that have been assigned CAS numbers and, thus, is not exhaustive. If a facility manufactures, processes, or otherwise uses, in greater than threshold quantities, a glycol ether that meets the category definition, whether or not that chemical is on this list, they must report the chemical.

SECTION 3.0 lists chemical mixtures which contain glycol ethers that meet the definition of the EPCRA section 313 'certain glycol ethers' category. EPA has tried to make this list as complete as possible; however, not all mixtures that contain reportable glycol ethers will necessarily appear on this list. If a facility manufactures, processes, or otherwise uses a mixture which includes components, in greater than threshold quantities, that meet the definition of the EPCRA section 313 'certain glycol ethers' category, they must report the glycol ether component(s) that meet the category definition.

SECTION 4.0 lists oligomeric and polymeric chemicals (for the category formula, $R-(OCH_2CH_2)n -OR'$, n is unspecified) that might contain a glycol ether component (n = 1, 2, or 3). EPA has tried to make this list as complete as possible; however, not all oligomeric or polymeric chemicals that might contain glycol ethers will necessarily appear on this list. If a facility manufactures, processes, or otherwise uses an oligomeric or polymeric chemical that contains components, in greater than threshold quantities, that meet the definition of the EPCRA section 313 'certain glycol ethers' category, they must report the glycol ether component(s) that meet the category definition.

Section 1.2 Ethylene Glycol Ethers Versus Propylene Glycol Ethers

The members of this category are glycol ethers derived from ethylene glycol, diethylene glycol, and triethylene glycol. This category does not contain glycol ethers based on propylene glycol, dipropylene glycol, or tripropylene glycol.

Section 1.3 Individually Listed Glycol Ethers

There are two chemicals, 2-methoxyethanol (CAS number 109-86-4) and 2-ethoxyethanol (CAS number 110-80-5) that are on the individual chemical list and CAS number list (40 CFR 372.65(a) and (b)). Threshold determinations should be made for each of these chemicals individually and separately from the glycol ethers category.

Section 1.4 General TRI Reporting Instructions

For general instruction regarding compliance with EPCRA section 313 requirements and form completion, please see the most recent version of the Toxic Chemical Release Inventory Reporting Forms and Instructions, available at: https://ofmpub.epa.gov/apex/guideme_ext/f?p=guideme:rfi-home

SECTION 2.0 CAS NUMBER LIST OF SOME CHEMICALS WITHIN THE GLYCOL ETHERS CATEGORY

EPA is providing the following list of CAS numbers and chemical names to aid the regulated community in determining whether they need to report for the glycol ethers category. The following list consists of individual chemicals that meet the definition of the EPCRA section 313 'certain glycol ethers' category. This list consists only of those chemicals that have been assigned CAS numbers and, thus, is not exhaustive. If a facility manufactures, processes, or otherwise uses, in greater than threshold quantities, a glycol ether that meets the category definition, whether or not that chemical is on this list, they must report the chemical.

SECTION 3.0 CAS NUMBER LIST OF SOME MIXTURES THAT CONTAIN GLYCOL ETHERS WITHIN THE CATEGORY

EPA is providing the following list of CAS numbers and chemical names for mixtures that contain a glycol ether component. This list includes chemical mixtures which contain glycol ethers that meet the definition of the EPCRA section 313 'certain glycol ethers' category. EPA has tried to make this list as complete as possible; however, not all mixtures that contain reportable glycol ethers will necessarily appear on this list. If a facility manufactures, processes, or otherwise uses a mixture which includes components, in greater than threshold quantities, that meet the definition of the EPCRA section 313 'certain glycol ethers' category, they must report the glycol ether component(s) that meet the category definition. Threshold calculations for the glycol ethers category should account only for the percentage of the mixture that is the glycol ether component(s) that meets the category definition.

Table 3-1: CAS Number List of Some Mixtures That Contain Glycol Ethers within the Category

Mixture Name	Glycol Ether Component	Mixture CAS Number
Ethanol, 2-butoxy-, mixt. with 2-(2- butoxyethoxy)ethanol and sorbitan monododecanoate poly(oxy-1,2-ethanediyl) deriv.	Ethanol, 2-(2-butoxyethoxy)- 112-34-5; Ethanol, 2-butoxy- 111-76-2	8073-50-5
Sorbitan, mono-9-octadecenoate, (Z)-, poly(oxy-1,2-ethanediyl) derivs., mixt. with 2-butoxyethanol and 2-(2-butoxyethoxy)ethanol	Ethanol, 2-(2-butoxyethoxy)- 112-34-5; Ethanol, 2-butoxy-111-76-2	8073-51-6

Carbamic acid, butyl-, 3-iodo-2-propynyl ester, mixture with [[(2-ethylhexyl)oxy]methyl]oxirane and 2-(2-methoxyethoxy)ethanol	2-(2-Methoxyethoxy)ethanol 111-777-3	156758-74-6

SECTION 4.0 CAS NUMBER LIST OF SOME OLIGOMERIC OR POLYMERIC CHEMICALS THAT MIGHT CONTAIN GLYCOL ETHERS WITHIN THE CATEGORY

EPA is providing the following list to aid the regulated community in determining whether they need to report for the glycol ethers category. This list includes oligomeric and polymeric chemicals (for the category formula, R - $(OCH_2CH_2)n$ - OR', n is unspecified) that might contain a glycol ether component (n = 1, 2, or 3). EPA has tried to make this list as complete as possible; however, not all oligomeric or polymeric chemicals that might contain glycol ethers will necessarily appear on this list. If a facility manufactures, processes, or otherwise uses an oligomeric or polymeric chemical that contains components, in greater than threshold quantities, that meet the definition of the EPCRA section 313 'certain glycol ethers' category, they must report the glycol ether component(s) that meet the category definition. Threshold calculations for the glycol ethers category should account only for the percentage of the glycol ether component(s) that make up the oligomeric or polymeric chemical that meet the category definition.
