SUMMARY

The City of Berwyn is located within ten miles of the Chicago Loop, situated between the Stevenson (I-55) and Eisenhower (I-290) Expressways and is in close proximity to Midway Airport, O'Hare Airport and served by the Metra Rail line. Due to its prime location and availability of affordable housing, the City has seen an increase in population, traffic and urban density over the past several decades.

The City's land area is 3.9 square miles with a growing population of 56,657 in which 72% are over the age of 18. This equates to a population density of 14,527 per square mile; 20% higher than that of Chicago's.

The City's combined sewer system is nearing 100 years old and incapable, at times, of handling the increased capacity especially during a storm. Much of the combined sewer system was designed to handle small one-story structures when pervious green areas were much larger. While the population and density of Berwyn has grown, the combined sewer system has remained largely untouched. Currently the City contains only 2.0% of open space. The City's current stormwater management system is a combined sewer system provided by the Metropolitan Water Reclamation District of Greater Chicago (MWRDGC), comprised of a conveyance system nearly 100 miles in length and storm laterals totaling 19 miles. Stormwater runoff and sewage are collected into a single pipe and ultimately discharged into the large interceptors of the MWRDGC where it is eventually treated at their Stickney Treatment Plant.

The City has experienced several instances of damaging flooding over the past couple of years. The City's combined sewers are outdated and were not originally designed to sustain the demands of a growing urban area. The Downspout Disconnection Program was intended to provide relief to the City's combined sewer system by encouraging the disconnection of downspouts so that the rooftop stormwater is not discharged into the City's system. Over the past couple of years, the City has experienced severe flooding events resulting in hundreds of thousands of dollars in damage and the displacement of residents from their homes.

Berwyn's stormwater and sanitary sewerage is conveyed to the MWRDGC interceptor system. Most of these City collection sewers have a very limited capacity to convey stormwater runoff due to their small size and long distances to the MWRDGC interceptor. During heavy rainfall events, MWRDGC has been forced to close the sluices gates to their system and excess flows are diverted into the surrounding waterways untreated.

The City of Berwyn requested $42,000.00 in grant funds through the Illinois Green Infrastructure Grant Program (IGIG) to implement the Residential Downspout Disconnection Program. The total cost of this project is $56,000.00. The City will provide the local match supporting 25% of the project in the amount of $14,000.00. The project assisted residents in disconnecting their

downspouts allowing the collected rooftop stormwater to splash on grade, therefore decreasing the volume of stormwater entering the sewers during a storm. The program intent was to increase permeability by allowing stormwater to infiltrate into the ground.

Introduction

Downspout disconnection has been identified as a stormwater management best practice to alleviate residential flooding and mitigate Combined Sewer Overflow (CSO) problems. Many of the gutter downspouts on Berwyn's homes are directly connected to the City's sewer system, increasing the volume and rate of stormwater entering the sewer system during a storm. Disconnecting the downspouts and allowing the water to drain onto a resident's front or rear yard will prolong the time at which the sewers reach capacity. Berwyn is hopeful that the Residential Downspout Disconnection Program will reduce the volume of stormwater entering the combined sewer system. Roof runoff will enter the green areas within the residential property limits and will infiltrate the ground rather than end up in the combined sewer system. This initiative will also reduce pollutant loads entering both the City system and the MWRDGC system and will ultimately reduce the discharging of pollutants into the area waterways. Thus, the Residential Downspout Disconnection Program will help improve local water quality in the long term. Residents will also have the option of collecting their rainwater for watering on dry days, which will also conserve City water.

The City of Berwyn proposed to utilize IGIG funds to initiate the Residential Downspout Disconnection Program with a starting goal of servicing 500 homes; totaling 82,300 square yards of impervious area throughout the City. The program has the potential for expansion and/or continuation based on resident need, interest and/or eligibility.

The project consisted of public outreach and education of the program. The City created program handouts that were mailed to residents, posted on-line and handed out at meetings and events. The City provided information packets with visuals to assist residents in identifying if their downspouts are connected, the best location for discharge and the steps in the labor and supplies required for disconnection. Upon completion of the work, the City inspected the work and provided reimbursement based on the extent of the improvements required to disconnect their downspouts.

The Program started April 15th, 2015.

The City of Berwyn is located within the Des Plaines River watershed. This watershed covers over 850,000 acres of predominately urban and industrial uses within Lake, DuPage, Cook and Will Counties. The Illinois EPA found that only 24% of the watershed was in "good" condition. The EPA went on to attribute the primary cause of problematic conditions to municipal point source pollution and urban runoff. Berwyn is located near a segment of the Des Plaines River identified as a Section 303(d) impaired water body for which sources of impairment include CSOs and urban stormwater runoff.

Des Plaines River

Not Supporting Use	Cause	Source
Aquatic Life Fish Consumption Primary Contact	Aldrin, Arsenic, Chloride, Lindane, Mercury, Methoxychlor, Flow regime alternations, Polychlorinated biphenyls, Fecal Coliform, pH, Phosphorus (Total)	Atmospheric Deposition – Toxics, Combined Sewer Overflows, Contaminated Sediments, Impacts from Hydrostructure Flow Regulation/modification, Municipal Point Source Discharges, Unknown, Dam or Impoundment, Urban

Chicago Sanitary and Ship Canal

Not Supporting Use	Cause	Source
Fish Consumption Indigenous Aquatic Life	Iron, Oil and Grease, Oxygen – Dissolved, Polychlorinated biphenyls, Phosphorus (Total)	Combined Sewer Overflows, Impacts from Hydrostructure Flow Regulation/modification, Municipal Point Source Discharges, Unknown, Urban Runoff/Storm Sewers

The chart above indicates the number of pollutants in the surrounding waters that can be attributed to CSOs and stormwater runoff. The capacity of the existing system is exceeded during heavy rainfall and has been the case of flooding within the City. The City wishes to pursue future projects to aid in stormwater management.

The City of Berwyn is located within the Des Plaines River watershed. This watershed covers over 850,000 acres of predominately urban and industrial uses within Lake, DuPage, Cook and Will Counties. The Illinois EPA found that only 24% of the watershed was in “good” condition. The EPA went on to attribute the primary cause of problematic conditions to municipal point source pollution and urban runoff. Berwyn is located near a segment of the Des Plaines River identified as a Section 303(d) impaired water body for which sources of impairment include CSOs and urban stormwater runoff.

Discussion

Initially the goal of the program was to disconnect downspouts for 500 homes, with an average roof square footage of 164.6 square yards, totaling 82,000 square yards. Stormwater from roof run-off would splash on grade and infiltrate through a resident’s front or backyard lawn. In theory, the average roof would collect 1,682.1 gallons of rainwater for a 2” rainfall event. 500 homes during the same storm event would equate to 841,050 gallons. The estimated pollutant reduction if all downspouts were directed to grass lawns is shown below:

	Pre-BMP Loading (lbs/yr)		Post-BMP Loading (lbs/yr)		Load Reduction (lbs/yr)
BOD	374		262		112
COD	2,380		1,785		595
TSS	5,253		1,839		3,414
LEAD	4		1		3
COPPER	1		0		0
ZINC	15		6		9
TDS	7,412		U		U
TN	102		92		10
TKN	54		U		U
DP	4		U		U
TP	14		10		3
CADMIUM	0		0		0

U = Removal Efficiency for the particular BMP and constituent unavailable.

The actual results of the downspout disconnection program resulted in the following:

- 1,013 households showed interest in the program.
- Upon preliminary inspection, 706 households were eligible in the program, since the downspouts were still connected.
- 306 households had already disconnected their downspouts prior to preliminary inspection.
- 607 households were approved to move forward with the program. The approved households did not have outstanding debts with the City and the downspouts were still connected.
- Final inspections have been completed to date on the 607 eligible households and have resulted in an additional 378 households have disconnected their downspouts.
- Out of the 1,013 households a total of 682 homes have disconnected downspouts.
- Totaling 112,257.2 square yards of roof area, estimating 1,146,510.2 gallons of rainwater during a 2 inch rain event.
- However only 32 households submitted for reimbursement through the program.

The City of Berwyn took part in the Metropolitan Water Reclamation District's (MWRD) free rain barrel program that ran from October 2014 to December 2016, concurrent with the downspout disconnection program and the flood mitigation program. The City's flood mitigation program started in November of 2014. The flood mitigation program offers financial support to residents to install a system to prevent sewer back-up into their homes (i.e. overhead sewer, backwater valve). Residents interested in the program are required to disconnect their downspouts as part of this program. Although many residents did not take advantage of the reimbursement program, many homes in Berwyn do have their downspouts disconnected.

The program created procedures and informational packets to help residents understand the benefits of disconnecting downspouts and the equipment and materials to do so. The City wishes to continue the program and distribution of information upon the expiration of the grant funds. Encouraging downspout disconnection is beneficial for the City of Berwyn, especially when considering the limitations and age of the existing combined sewer system. This program also engaged City staff to inventory the downspouts of resident homes.

The program did not meet the financial goals originally set. However, the remaining funds were transferred to the Green Alley program also included as part of the Berwyn Stormwater Project (IGIG 1419). The Green Alley program is described in a separate report.

Project Costs

Agency	Total
Illinois EPA	$9,754.38
City of Berwyn	$3,427.21
Total Project Cost	$13,181.59
