

CONTENT OF EMAIL from Angela Lynch to Ken on Sept. 16, 2014

Dear Dr. Olden,

I am currently organizing a framing workshop on the application of endogenous exposure data in chemical assessment within ARASP at ACC projected sometime in February-March 2015. I would like the opportunity to get your input and thoughts on the agenda and speakers. I, along with my colleagues, Kimberly Wise and Rick Becker, would like to request a meeting time with you in the next few weeks.

Others topics we would like to discuss include the following:

- Framing the key concepts and implementation of the 2014 NAS IRIS recommendations
- Case study of implementing the 2014 NAS IRIS recommendation for Bayesian analysis
- Evaluation of potential for risk of bias due to study funding source
- Collaborative research opportunities on mode of action in chemical assessment

I look forward to hearing from you and learning more on how we can work together on these challenging scientific issues.

Kindest Regards,

Angela Malin Lynch, MSPH, Ph.D.
