

Terminology Services - Vocabulary Catalog List Detail Report

Term
Alternative evaluation
Definition: A systematic evaluation of alternative ways to accomplish a task that reviews the cost, performance, and environmental impact of each alternative under consideration. Ideally, the range of evaluation would include alternative chemicals, products, processes, technology, work procedures, and disposal methods.
Ancillary material
Definition: Material input that is used by the unit process producing the product, but is not used directly in the formation of the product.
Aspect, environmental
Definition: Element of an organization's activities, products, and services that can interact with the environment.
Assessment
Definition: An estimate or determination of the significance, importance, or value of something.
Certification
Definition: Procedure by which a third party gives written assurance that a product, process, or service conforms to specified requirements.
Compliance

Terminology Services - Vocabulary Catalog List Detail Report

Term
Definition: An affirmative indication or judgment that the supplier of a product or service has met the requirements of the relevant specifications, contract, or regulation; also the state of meeting the requirements.
Continual improvement Definition: Process of enhancing the environmental management system to achieve improvements in overall environmental performance, in line with the organization's environmental policy. Note - The process need not take place in all areas of activity simultaneously.
Corrective action Definition: An action taken to eliminate the causes of an existing nonconformity, defect, or other undesirable situation in order to prevent recurrence.
Effects Definition: Refers to changes, actual or potential, caused by a chemical, activity, or process as it comes into contact with humans or the environment.
Environment Definition: Surroundings in which an organization operates, including air, water, land, natural resources, flora, fauna, humans, and their interrelation.
Environmental aspect Definition: Element of an organization's activities, products, and services that can interact with the environment.

Terminology Services - Vocabulary Catalog List Detail Report

Term
Environmental assessment Definition: A systematic, documented, periodic and objective review by company management of facility operations and practices related to meeting environmental requirements. The assessment is a systematic, documented verification process of objectively obtaining and evaluating evidence to determine whether specified environmental activities, events, conditions, management systems, or information about these matters conform with selected criteria, and communicating the results of this process to management.
Environmental management system Definition: Organizational structure, responsibilities, practices, procedures, processes, and resources for developing, implementing, achieving, reviewing, and maintaining the environmental policy. Acronym: EMS
Environmental objective Definition: Overall environmental goal, arising from the environmental policy, that an organization sets itself to achieve, and that is quantified where practicable.
Environmental performance Definition: The measurable results of the environmental management system, related to an organization's control of its environmental aspects, based on its environmental policy, objectives, and targets.
Environmental performance evaluation Definition: Process to measure, analyze, assess, report, and communicate an organization's environmental performance against

Term
criteria set by management.
Environmental performance indicator
Definition: A specific datum selected, such as volume of a chemical used, which will provide measurable information regarding progress toward meeting a specific environmental goal.
Environmental policy
Definition: Statement by the organization of its intentions and principles in relation to its overall environmental performance, which provides a framework for action and for the setting of its environmental objectives and targets.
Environmental target
Definition: Detailed performance requirement, quantified wherever practicable, applicable to the organization or parts thereof, that arises from the environmental objectives and that needs to be set and met in order to achieve those objectives.
Function
Definition: Performance characteristic.
Hazard
Definition: The ability to cause damage.
Impact, environmental

Terminology Services - Vocabulary Catalog List Detail Report

Term
Definition: Any change to the environment, whether adverse or beneficial, wholly or partially resulting from an organization's activities, products, or services.
Inputs and outputs
Definition: Material or energy that crosses a unit process boundary. Example C Materials may include raw materials, products, emissions, and waste.
Interested party
Definition: Individual or group concerned with or affected by the environmental performance of an organization.
Life cycle
Definition: Consecutive and inter-linked stages of a product system, from raw material acquisition or generation of natural resources to the final disposal.
Life-cycle assessment
Definition: Compilation and evaluation, according to a systematic set of procedures, of the inputs and outputs of materials and energy and the potential environmental impacts of a product system throughout its life cycle.
Acronym: LCA
Life-cycle characterization
Definition: Element of the life-cycle impact assessment phase in which the potential impacts associated with the inventory data in each of the selected categories are analyzed.

Terminology Services - Vocabulary Catalog List Detail Report

Term
Media
Definition: The means or substance through which something is transmitted, e.g., air, water, or soil.
Objective, environmental
Definition: Overall environmental goal, arising from the environmental policy, that an organization sets itself to achieve, and that is quantified where practicable.
Performance characteristic
Definition: Function
Pollution prevention
Definition: Pollution prevention means reducing pollution or waste at the beginning of a process. The underlying theory to this approach is that if you don't generate waste in the first place, there is nothing to treat or dispose of.
Prevention of pollution
Definition: Use of processes, practices, materials, or products that avoid, reduce, or control pollution, which may include recycling, treatment, process changes, control mechanisms, efficient use of resources, and materials substitutions.
Procedure
Definition: A specified way to perform an activity.

Terminology Services - Vocabulary Catalog List Detail Report

Term
Process
Definition: A set of interrelated resources and activities that transform inputs into outputs.
Product
Definition: Any good or service.
Risk
Definition: This is the probability that something undesirable will happen from exposure to a hazard.
Risk assessment
Definition: Risk assessment is the process of gathering data and making assumptions to estimate short- and long-term harmful effects on human health or the environment from exposure to hazards associated with the use of a particular product or technology.
Root cause
Definition: A fundamental deficiency that results in a nonconformance and must be corrected to prevent recurrence of the same or similar nonconformance.
Stakeholders
Definition: Those groups and organizations having an interest or stake in a company's EMS program (e.g., regulators, shareholders, customers, suppliers, special interest groups, residents, competitors, investors, bankers, media, lawyers, insurance companies, trade

Term
groups, unions, ecosystems, cultural heritage, and geology).
Substitutes
Definition: A chemical, product, process, or technology, which may be substituted for another to perform the same function or achieve the same end result.
Target, environmental
Definition: Detailed performance requirement, quantified wherever practicable, applicable to the organization or parts thereof, that arises from the environmental objectives and that needs to be set and met in order to achieve those objectives.
Volatile
Definition: Ability to evaporate easily.
Waste
Definition: Any output from the product system that is disposed of.
