Risk assessment		Exposure Factors Handbook: Glossary	Glossary and Key Word List				
Definition: A process intended to calculate or estimate the risk to a given target organism, system, or population, including the							
identification of attendan	t uncertainties, following exp	posure to a particular agent,	, taking into account the inf	nerent characteristics of the			
agent of concern as well	as the characteristics of the	specific target system. The	e risk assessment process	includes four steps: hazard			
identification, hazard cha	aracterization (related term: I	Dose-response assessmen	t), exposure assessment, a	and risk characterization. It			
is the first component in	a risk analysis process.

		Assessment					
Definition 1: In the	e context of human health,	the evaluation of scientific ir	format	tion on the hazardou	is properties of environmental		
agents (hazard ch	naracterization), the dose-re	esponse relationship (dose-i	espon	se assessment), an	d the extent of human exposure to		
	<i>,</i> ,	roduct of the risk assessme o what degree (risk characte		0 0	the probability that populations or		
		•		<i>,</i>	the conditions of human or		
	Definition 2: For air toxics, the scientific activity of evaluating the toxic properties of a chemical and the conditions of human or						
ecological exposure to it in order both to ascertain the likelihood that exposed humans or ecological receptors will be adversely							
affected, and to characterize the nature of the effects they may experience. [EPA 2004]							
Definition 3: Qualitative and quantitative evaluation of the risk posed to human health and/or the environment by the actual or							
potential presence and/or use of specific pollutants.[EPA 2005b]							
Definition 4: A methodology used to examine all possible risks involved with a particular product or organism. Risk assessment can							
be divided into fou	ur parts: identification of ha	zards; dose response (how	nuch e	exposure causes pa	rticular problems (i.e., cancer,		
convulsions, deat	h); exposure assessment (determining how much expo	sure w	vill be received by pe	eople during particular activities);		
and risk character	rization (determining a prob	bability that a risk will occur).	[EPA	2005e]			
Definition 5: A sci	and risk characterization (determining a probability that a risk will occur). [EPA 2005e] Definition 5: A scientifically based process consisting of the following steps: (i) hazard identification, (ii) hazard characterization, (iii)						

Term	Acronym	Vocabulary	Vocabulary Type	Preferred Term			
exposure assessm	nent, and (iv) risk characte	erization. [CAC 1999, 2002, 200	3, FAO/WHO 2003a,b]				
Definition 6: The s	cientific evaluation of know	wn or potential adverse health e	effects resulting from hu	man exposure to hazards. The			
process consists o	process consists of the following steps: hazard identification, exposure assessment, hazard characterization (dose-response), and						
risk characterizatio	on. [FDA 2002]						
Definition 7: The p	rocess of identifying and r	neasuring the risk resulting fror	n a specific use or occu	rrence of a chemical. Risk			
assessment takes	into account the possible	harmful effects on people of us	ing the chemical in the	way that is proposed and all the			
possible routes of	exposure. [FSA 2005]						
Definition 8: When	referring to a microbial ris	sk assessment, a process that e	evaluates the likelihood	of human health effects occurring			
after exposure to a	a pathogenic microorganis	m or to a medium in which path	ogens exist. [ILSI 2000]]			
Definition 9: A prod	cess intended to calculate	or estimate the risk to a given t	target organism, system	or (sub)population, including the			
identification of att	endant uncertainties, follo	wing exposure to a particular ag	gent, taking into accoun	t the inherent characteristics of the			
agent of concern a	as well as the characteristi	cs of the specific target system	. The risk assessment p	rocess includes four steps: hazard			
identification, haza	ard characterisation (relate	ed term: dose-response assessi	ment), exposure assess	ment, and risk characterization. It			
is the first compon	ent in a risk analysis proce	ess. [IPCS/OECD 2004]					
Definition 10: A sy	stematic approach to orga	nizing and analyzing data, scie	ntific knowledge, and ot	her information to identify possible			
adverse human he	alth or environmental effe	ects which may occur because o	of exposure to an agent	(chemical, microbiological, or			
physical substance	e) or an activity (skiing, cli	mbing a ladder, etc.). It also est	imates the likelihood of	the effect occurring under			
specified condition	is. A risk assessment gene	erally has four steps: hazard ide	entification, dose-respor	ise assessment, exposure			
assessment, and r	assessment, and risk characterization. [NYS 1998]						
Definition 11: The process of identifying a hazard and characterizing the risk presented by that hazard, in qualitative or quantitative							
terms. [OMAF 199	7]						
Definition 12: The process of establishing information regarding acceptable levels of a risk and/or levels of risk for an individual,							
group, society, or the environment. [RAIS 2004, SRA 2004]
